

Integrated Community Sustainability Planning Tool

Developed by Drs. Chris Ling, Ann Dale, Kevin Hanna

A community sustainability plan is about integrating social and economic imperatives into the quality of place (the ecological imperative). The integration of people, place and economy into a single plan over a long-term perspective is a critical process for achieving sustainable community development. In many ways an integrated sustainable community plan is a process of reconciliation, with the three imperatives of sustainable development being brought together in an integrated policy planning and collaborative decision-making framework.
